

## ZixPort®

Secure Messaging Portal

### Who Trusts Zix Email Encryption?

More than 14,000 customers including:

- All Federal Financial Institutions Examination Council (FFIEC) regulators
- The U.S. Securities and Exchange Commission
- Seven divisions of the U.S. Treasury
- One in four U.S. banks
- One in five U.S. hospitals
- More than 30 BCBS organizations

### Benefits:

- Securely send to anyone, anywhere on any device
- No software or user training needed
- No impact on internal IT resources or infrastructure
- Branding customization based on your organization's needs
- Feature customization for optimum flexibility

ZixPort is a secure messaging portal for ZixGateway® and ZixMail® that provides convenient and secure send and receive capabilities. ZixPort provides companies a way to encrypt email communications with customers and business partners who do not have email encryption.

When an encrypted email is delivered via ZixPort, the recipient receives a notification email that links to the secure messaging portal. First-time users go through a simple, one-time registration process using a new login credential or their existing Google or Microsoft credentials, including Hotmail, Outlook.com, MSN, and Windows Live. After signing in, the user can view the message and any attachments over a Secure Sockets Layer (SSL) connection. Complete privacy is ensured by using the ZixCorp Best Method of Delivery<sup>SM</sup> for all return communication.

### Branding and Customization

ZixPort is fully customizable to match your corporate brand and meet your communications needs. You can customize ZixPort to include secure compose, reply and reply-all capabilities allowing full, two-way communication with your customers and business partners. You can also choose to use the address book and create message expiration and password policies to meet your specific security requirements.

**Features:**

- Convenient secure email on any mobile device
- Encrypted read, reply and reply-all capabilities for all recipients
- Secure recipient compose capability for two-way communication
- Automatic custom notification emails to all recipients
- Message recall for additional control
- Two-factor authentication for increased security

**Composing Messages**

ZixPort enables your customers and business partners to initiate an encrypted email conversation with you via your website. Adding a “contact us” button on your site allows users to securely contact you even if they do not have their own email encryption capabilities.

And if you would you like to enable partners, board members, or others not managed by your ZixGateway solution, ZixPort lets you authorize select users to compose encrypted messages for delivery to anyone — inside and outside your managed domain.

**Mobile Support**

ZixPort offers encrypted email anytime, anywhere and on any Internet-enabled mobile device. ZixPort provides simple, convenient secure email with mobile-optimized layouts, fully functional navigation and maximum user convenience.

There is nothing to install or configure, and ZixPort works across all major mobile platforms, including Android™, BlackBerry® and iPhone®. Designed to maximize mobile device capabilities, ZixPort offers comprehensive mobile device support without any user maintenance.

**Reliable and Cost Effective**

ZixPort is a hosted portal and requires no effort to set up or maintain. Our data center is a SOC 3 certified, SOC 2 accredited and PCI DSS 3.1 compliant facility. The ZixData Center offers redundant power sources, storage units and security measures, and it has a track record of consistent 99.999% availability. ZixCorp prides itself on maintaining the highest levels of performance and reliability.

**Strong Security**

ZixPort provides strong security with flexibility—you choose which security features to enable based on your business standards. ZixPort provides two-factor authentication, password “remember me,” and integration with your existing Single Sign-On technology. You can also define the password policy to ensure your user logins align with your corporate password requirements.
